Industrial Adhesive Experts

Combining high quality products, with excellent technical back up, to deliver a first-class customer service experience

Who we are

We love solving problems! We question our customers about the issues they're facing and listen closely to their replies. We then apply our expertise to arrive at an in-depth understanding of their problems, and we use those insight to come up with the best solutions for them and for their projects.

Whether we're solving an issue with adhesive performance in a difficult production environment or providing a consistent service to a tight production schedule, we always supply only the best products available. The greater the challenge, the better! We will persevere until we find the right solution, no matter how long it takes.

We care about our world

We pride ourselves on being an ethical company and, as such, we have joined the SME Climate Commitment. This means we plan to reduce our greenhouse gas emissions by at least 0% by 2030 and achieve net zero emissions by 2050.

Why Anchor

Expert technical support

Technical resource centre

ISO 9001:2008 registered

Efficiency audits

Innovative & high quality products

Next day nationwide delivery

First-class customer service

Our Range

ANCHOR BOND

An exclusive range of PVA's available in different grades and bespoke mixes depending on application and final product strength requirements.

ANCHOR SPRAY

A collection of pressurised spray adhesives used across multiple industries including upholstery and panel production.

ANCHOR STIK

A range of sprayable contact adhesives, including non-flammable alternatives to the traditional, offering a safer working environment.

ANCHOR MELT

The hotmelt range of adhesives which boost production times and improve operational efficiencies.

ANCHOR PRO

The polyurethane adhesives are available in different sizes, and with own branding for those who create kits for the building industry.

ANCHOR RESIN

Offering our standard and Ultra collection of liquid resin mixes, reducing health and safety risks and costs.

Panel Production

Supporting panel manufacturers with the high-quality materials and solutions they need to produce exceptional products. Whether it's laminating, veneering, or creating acoustic and construction panels, we provide the specialized materials and expert support to help manufacturers meet their clients' demands.

Our bespoke solutions are designed to enhance your production capabilities, ensuring that you can deliver durable and performance-driven panels across industries like furniture, construction, and interior design. By partnering with Anchor, you gain access to tailored resources and materials that enable you to innovate, streamline production, and meet even the most specific customer requirements.

Upholstery and Furniture

Upholstery manufacturing in the UK has evolved significantly over the years, with a growing emphasis on sustainability and worker safety. Traditionally reliant on solvent-based adhesives that posed environmental and health risks, the industry has shifted towards safer alternatives. Modern adhesives, such as water-based or hot-melt adhesives, are now commonly used, reducing harmful emissions and improving air quality in manufacturing settings. These new adhesives are not only more environmentally friendly but also contribute to safer working conditions for staff, aligning with stricter regulations and the increasing demand for greener production processes.

We help our customers to choose the best adhesive for their manufacturing processes offering both the best option for their staff and their client when the product is in situ. Whether producing commercial or residential furniture it is crucial to keep emissions and flammability to a minimum.

Building and Construction

Adhesives play a crucial role in the construction industry, especially in flooring, insulation, and structural insulated panels (SIPs). They ensure strong, durable bonds that enhance the stability and energy efficiency of buildings. In flooring, adhesives are essential for securing materials like tiles and carpets, while in insulation and SIPs panels, they help create airtight seals that improve thermal performance.

Anchor provides tailored adhesive solutions for the construction sector, offering own-branded smaller adhesives as well as bespoke formulations. These customised options meet specific project needs, ensuring high performance and reliability across various applications.

Industrial Assembly and Manufacturing

Adhesives are a key component in the industrial assembly and manufacturing of wood products, offering versatile solutions for material bonding. For example adhesives such as PVA, urea-formaldehyde, and polyurethane are commonly used to join wood, plastics, and other components. These adhesives provide strong and durable bonds, enhancing the structural integrity of products like plywood, particleboard, and laminated beams. In addition to their strength, adhesives allow for more efficient assembly processes compared to traditional mechanical fasteners, as they offer faster curing times and the ability to join irregular surfaces. This efficiency is vital in mass production, where high precision, reduced material waste, and cost-effectiveness are essential.

White Labelling

Anchor supports manufacturers by providing custom-labelled adhesives featuring own branding, helping to enhance brand visibility and create a more professional appearance for your products. Available in 1kg and 5kg containers, the custom branding is used across many industries, ensuring our customers have a reliable and high-quality adhesive solution while promoting their brand identity. This customisation option allows you to reinforce your brand presence at every stage of production and installation.

Laboratory Testing

At Anchor, we offer in-house lab testing services for customers with new projects or product queries. Our expert team conducts thorough tests to ensure we provide the right adhesive solutions tailored to each customer's specific needs. By delivering detailed analysis and technical support, we help clients make informed decisions, ensuring optimal performance and reliability for every project. This personalized approach guarantees that our customers receive high-quality, tested products that meet their unique requirements.
